

Counting in 10s

This activity will help your child to count in 10s.

You will need six 10p and nine 1p coins.

- Fill in the remaining numbers on the grid and shade each column a different colour.
- Choose a number on the grid and make it with 10p and 1p coins.
- Let your partner make the number below (10p more).
- Can you make the number below that?
- Choose a new number and repeat.

10	11	12	13	14	15	16	17	18	19
20	21			24					
30						36			39
40	41				45				
50			53				57		
60	61	62	63	64	65	66		68	69

If you have time try closing your eyes while your partner places a counter on a number. Then look and try to work out which number is hidden by looking at the number above it.
