

# How many pots can you fill?

This activity will help your child to estimate and measure capacity.

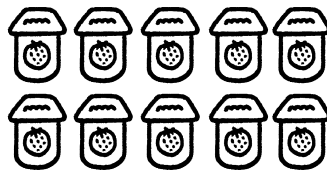

You will need a jug, some empty yogurt pots, some plastic beakers and a 1-litre container. This is a messy activity!

- Fill the jug with water.
- Estimate how many yogurt pots you can fill with the water from the jug.
- Write down the estimate.
- Pour the water into the pots.
- Write down the actual number and colour in the same number of pots.

I think the jug will fill  pots.

The jug filled  pots.

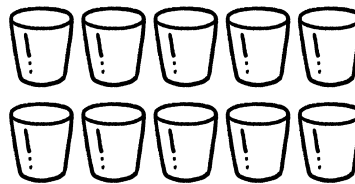

- Estimate and measure how many beakers you can fill with water from the same jug. Colour in the number of beakers filled with water.

I think the jug will fill  beakers.

The jug filled  beakers.

If you have time try to find out how many yogurt pots you can fill with water from a 1-litre container.

The 1-litre container filled  pots.
